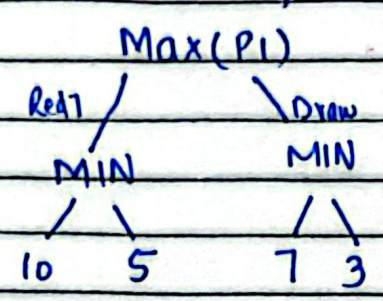
Minimax Tree (Defensive Strategy)



Backtracking:

left branch : min(10,5) = 5

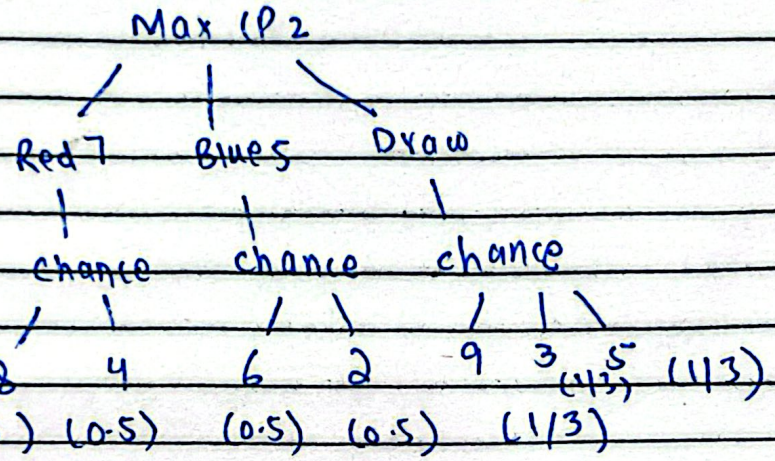
Right branch : min(7,3) = 3

Final decision :

max(5,3) = 5

Best move = Red7

⇒ Expectimax Tree (offensive Strategy with chance Node)



Expected values :

Red7 : 8+4/2 = 6

Blue5 : 6+2/2 = 4

Draw : 9+3+5/3 = 5.67

Final Decision :

max(6,4,5.67) = 6

Best move = Red7

Minimax uses a defensive strategy and assumes worst-case opponent moves. Expectimax uses probability and calculates expected outcomes.

Expectimax performs better because it handles uncertainty and randomness more effectively than Minimax.
